

An Open-source Web-based Application for Development of Resources and Technologies in Underresourced Languages

- A new open-source, web-based software that systematises storage, management, annotation, analysis and sharing of linguistic data gathered from the field as well as that crawled from various sources on the web.
- It has support for both the major workflows:
 - **The field linguists' workflow**
 - **The computational linguists' workflow**
- Major features:
 - **Integration with HuggingFace Hub** and gives an UI-based access to the models on the hub.
 - **Granular access control and sharing** option,
 - Multiple **data exports formats** including CSV, JSON, XLSX, LATEX, PDF, Textgrid, RDF, etc
 - Multiple **data import formats** viz. LIFT XML, XLSX, JSON, CSV, TSV, Textgrid, etc,
- Publicly available for use and testing on our server and its source code has been released under **AGPL license** on our GitHub repository - separate commercial licensing.
